Facebook, Twitter, LinkedIn: @sureshmaran, @uniteserve

To	Her Majesty Queen and Her Family Royalty of UK UK	and	Prime Minister of UK, 10 Downing Street London UK.

My name is Dr. Suresh Kumar Maran. I am a scientist, engineer, and author. I do advanced research on the foundations of social sciences and physical sciences. I have a Ph. D from the University of Pittsburgh, USA, in the field of quantum gravity. My research works cover all advanced areas in technology, advanced physics, and modeling social and economic phenomena. I recently finished writing my book "The Emotional and Relational Foundations of Human advancement", which I believe is of critical importance to the UK for its mission to be the world's leading business center, science, and international relations. I am writing this letter to explain the critical importance of these for addressing the UK development, solving various global problems, ensuring the existence of civilian governments, and ensuring the survival of human civilization beyond the 21st century.

I have done extensive research work (30years) on the foundations of both physical sciences and social sciences, which is essential to understand the holistic picture of what is going on in the world. This is a summary report to the government and family of royalty of the UK what I have discovered, and to be shared with all the states of the union. This letter is brief, references are provided in the end for detailed information, and contact information is given for further discussion.

The UK is the place in which the industrial revolution was born and has been leading the world in science and technology and is the nation that shaped the modern world. But there was a gap that all the way goes to the industrial revolution in the UK. This gap is threatening the modern world created by the legacy of the British Empire.

The UK has fought in two world wars and sheds blood to maintain civility in the world. The situation was such that countries were technologically advanced, but relationships were severely compromised. This was the situation all the way from the beginning of the industrial revolution. Countries fighting with each other through technology. This can be explained by how people were educated. All the way from the industrial revolution, education was focusing on technical training and competition. Maintaining relationship skills was not the focus of education. So, while the world is evolving technologically, but relationships were deteriorating, with numerous wars and social relations deteriorating, with extreme groups rising in Europe and other parts of the world. Families

also have weakened. So, the imbalance between the advancement of technology, and lagging in relationships has created problems.

The UK has practically pulled the world from the dark ages and created the modern world, with the political, social, and economic climate, and laid the foundations for science and technology. But despite this because of the relationship's problems with the British states outside the British Isles involving equality and freedom, its contributions have gone unrecognized. The imbalance is responsible for this, and the world continues to suffer because of the same problem.

Now while the world is politically relatively stable but is suffering from numerous crises: "Pandemic, inflation, inequality, global warming". Again, my research indicates this imbalance between relational and technological advancement, is again the reason for this. My research indicates the long-term trend of this imbalance is a threat to the existence of civilian governments, because of the emergence of hyper-extremism or high-tech fascism in the future. I am afraid if we don't address this it will have catastrophic consequences for human civilization in long term. In my paper "Analyses of global crises, Highly Adverse long-term trend, and Prevention", I analyzed this, given reference [3A].

Currently, the world has relationship issues in every aspect of life: political, economic inequality, family instability, child abuse, violence, etc. As technology advances, it increases the risk of the destructive potential of technology, development of lethal technology, and abuse of technology. No law or rule banning the development of lethal technologies can prevent it. If there is a will there is a way. The only way this can be avoided is if humanity advances relationally, there are smooth and intelligent relationships at every level of society, and every aspect of society. Bringing this requires an extensive change to education and the basic philosophy of human life.

My bookset "The Emotional and Relational Foundations of Human advancement" precisely aims to fix the imbalance. It lays systematic foundations to understand human emotional and relational behavior both at the individual, national, and international level, and help manage relationships. The bookset gives a systematic description of the interconnection between emotions, relational phenomena, and the advancement of human life from the individual to nations to the whole human race. It gives detailed insight into how emotions and relations influence politics, economics, people diversity, history, science, cultural differences, etc. It also explains how all these influence each other. The book is currently available in Amazon Kindle as an ebook. Detailed information is available in reference[2].

To fulfill the UK's mission of maintaining leadership in science, technology, and economics, the UK needs to use my book to bring relational advancement in the UK and the world, to bring a balance between technology and relationships.

I have been prototyping a platform called UNITESERVE to address various global issues, pronounced as unite+serve. It is a platform to combine the balance of technology and relationship expertise to address the various global crises, help global economic advancement, and ensure the safety of the future of human and civilian governments. UNITESERVE project aims to address these issues in one package, and the proposal and all detailed information are given in the references in the end. The prototype is currently online at www.uniteserve.com.

UNITESERVE is an advanced global relational feedback system that is designed to stabilize and advance global economic activity. It is designed to foresee the future trends in global human activity both good and bad events, using data science and research. Its function is to help governments and organizations steer the world away from future crises and steer it towards a stable and sustainable future. I have been prototyping this platform for the last seven years, it aims to combine technological and relational solutions to solve world problems. I have attached the proposal for this platform. The documents needed for its operation will be made public soon. It is highly extensive and involved, so I would request the government and family of royalty of the UK to appoint dedicated personal to investigate this proposal. All the documents relating to this platform given in the references [4] and [5] will be made public soon or will be provided on request.

The world is under a lot of stress at many levels: inflation, aftereffects of the pandemic, resource constraints, pollution, stock market volatility, global warming effects, risk of advanced technology, etc. All these crises can join and amplify each other to sink the human civilization itself in the future. This UNITESERVE platform is essential to properly steer the world and must be fully implemented as fast as possible, within a decade, to maintain global economic stability and sustainability. For information, please read reference my paper on crisis [3A] and the proposal [4].

I believe the imbalance between relationships and technological advancement must be addressed and fixed within the next 15 years. If not, I believe the world may face a severe threat to the existence of civilian governments, through hyper extremist events and the rise of high-tech fascism that potentially could convert the world into hell-like conditions. So, I would like the UK to need to act as fast as possible.

Following is the help I need as soon as possible to go ahead with various operations:

1) I would like to address the UK parliament to explain the imbalance between relationship and technology, deeper analysis of it, and why and how the UK states and other nations should address it as soon as possible.

2) Currently, education in the UK and around the world is focused on 'competition' and 'technology'. This will only read to high-tech fascism compromising civilian governments, democracy, and possibly leading to the collapse of civilization. The focus on education must be changed to a relationship center, with a proper mix of relational and technical skills. the UK universities not only train the professionals in the UK but also around the world. As a place where the industrial revolution has begun, the UK must lead the way to change education. All the necessary foundations are laid in my book. I have written a separate paper regarding the issue of education by the title 'The global emergency to change education to save the civilization', which is attached to the mail and also given in the references [3D].

3) Funding for a) Review, revision, and promotion of my book in the UK and around the world b) Create a team to study the UK in detail to understand how political, economic, cultural, and educational aspects of states are interacting with each other to help understand future economic possibilities, improving relationships with it, future crises, and solving many of the current problems faced by the UK, c) Study of interaction of the UK with the rest of the world, d) conversion of my book into a textbook format to help educate British students in emotional and relational foundations for personal and national advancement.

4) An analysis, consultation, and collaboration on creating the UNITESERVE platform. This is a quite advanced platform that plans to predict and solve future crises using data science, foundations in my book, and an integrated global relational feedback system. I believe it needs to be first strategically implemented in the US, UK, EU, and India and expanded further. The UNITESERVE platform is quite powerful it needs legal review for checks and balances and requires global collaboration to get implemented. I need the UK govt to assist in this regard.

5) Startup fund to establish a UK base of the UNITESERVE platform. I have incorporated UNITESERVE limited in the UK for this purpose. The fund will be used to establish offices in centers in the top UK Cities, create a management team to manage activities. Creation of career infrastructure, to train experts both in relational and technical skills for the foundational activities of the project such as research, the transformation of educational systems, etc. The project component of the platform will be used to conduct various projects of national and global interests, and train young students in a career with both relationship skills, and science and technology. The research platform is used to collect data from various services, research, provide info for government and organizations, to help in planning for the future economic possibilities and avoiding crises.

6) Ideas in my book are not opinions but models built on information I have. There could be errors that could be revised. Most ideas cannot be modified without causing problems with internal consistency or factual information. So I would like the UK government, advise people not to take anything I have in my book personally against me, and give security while I conduct the relational campaign.

Please know that writing this book and all the related work costed 15 years of my life, and I almost died in the process, have undergone extensive trauma trying to research and gather all the information. I had no choice because not doing it will have catastrophic consequences on the future of human civilization. No longer I can proceed without help, and please support me with the list of requests I made. It has to be implemented as rapidly as possible at least within 15 years, as multiple crises are coming in the future. So, request immediate financial assistance to move to a secure place, continue my research, conduct a global relational campaign, and investigate and launch the UNITESERVE platform.

Respectfully,
Dr. Suresh K Maran Ph.D
